

Bannawat Rattanak

Game Developer (Unity / C#) | Backend / Full Stack Developer

bannawat.work47@gmail.com |
0642256796
Portfolio: bannawat.site | GitHub:
github.com/Bannawat01
Nakhon Ratchasima, Thailand

PROFESSIONAL PROFILE

Computer Science student combining Unity 6/C# game development with production-oriented backend and full stack engineering. Experienced in modular, event-driven gameplay systems, RESTful APIs, authentication, databases, deployment, workflow automation, and third-party integrations. Built a national-finalist game prototype, launched a monitoring SaaS with paying customers, and published open-source developer tooling. Seeking a Co-op or Internship role where strong software engineering can support engaging games or reliable digital products.

Target roles

Game Developer | Backend Developer | Full Stack Developer

Co-op availability

2 Nov 2026 - 19 Feb 2027 (16 weeks)

EDUCATION

Rajamangala University of Technology Isan

Bachelor of Science in Computer Science | Expected graduation: 2027 | GPA: 3.13

TECHNICAL EXPERTISE

Game Development	Unity 6, C#, Godot, gameplay systems, modular and event-driven architecture
Programming	C#, Go (Golang), TypeScript, Python
Backend & APIs	Backend development, RESTful API design and integration, Fastify, chi, Bun/Elysia
Frontend	Next.js, HTMX, Tailwind CSS, server-rendered interfaces
Data & Authentication	MongoDB Atlas, MySQL, PostgreSQL, Clerk, Google OAuth 2.0, JWT
Cloud & Delivery	Docker, Render, Vercel, Z.com, GitHub Actions, Git/GitHub
Integration & Automation	n8n, OpenAI API, Stripe, Discord, Telegram, webhooks
Testing & Documentation	Bruno, Postman, Swagger, validation, debugging

SELECTED PROJECT EXPERIENCE

Silent Ember | 3D Psychological Horror Game

Unity 6, C# | 2026 | github.com/Bannawat01/Project-Silent-Ember

- Built a first-person explore-and-uncover experience set in a burned house, with narrative progression and multiple endings.
- Engineered modular, event-driven scripts that separate progression logic, UI screens, and game-sequence flow managers to keep systems decoupled and extensible.
- Designed a hidden exploration-gated ending system that tracks optional memory fragments and selects an ending from the player's discovery ratio without exposing an on-screen meter.
- Selected as Northeast Thailand regional representative at the National Software Contest national final in the entertainment-software category and awarded development funding.

Wakeful | Production Monitoring SaaS

Go, MongoDB Atlas, HTMX, Tailwind CSS, Docker | 2026 | wakeful.dev

- Designed and built a solo SaaS that monitors cron jobs, SSL certificates, DNS records, and HTTP endpoints, with alerts through email, Discord, Telegram, and webhooks.
- Engineered a Go backend using chi and a MongoDB Atlas repository pattern, with a scheduler-agnostic check runner, Stripe subscriptions, and Clerk authentication.
- Implemented confirmation-based alerting to reduce false-positive outage notifications, plus public status pages and embeddable uptime badges.
- Deployed the application as a single Docker image on Render; the product is live with paying customers.

SELECTED PROJECT EXPERIENCE CONTINUED

Albion Online Database | Full Stack Market Analytics

TypeScript, Next.js, Tailwind CSS, Bun/Elysia, MongoDB | 2026 | github.com/Bannawat01/albion-api

- Developed a full stack application for Albion Online market data and analytics, including real-time item prices, historical trends, gold-price tracking, filtering, and pagination.
- Implemented Google OAuth 2.0 and JWT authentication, request validation, database connection pooling, and health checks.
- Integrated an n8n-powered AI assistant and prepared Docker, Render, and Vercel deployment configurations.

RepoRadar | GitHub-to-Discord DevOps Automation

TypeScript, Fastify, Zod, GitHub Webhooks, Discord | 2026 | github.com/Bannawat01/RepoRadar

- Built a webhook pipeline that captures GitHub push, pull-request, and issue events and delivers real-time Discord rich embeds.
- Added HMAC-SHA256 signature verification, Zod validation, event normalization, and retry/backoff for Discord delivery.
- Moved routing and embed generation from n8n into the API, eliminating a third-party runtime dependency while retaining the legacy workflow for reference.

ai-fetch-healer | Open-Source npm Package

TypeScript, GitHub Actions | 2026 | github.com/Bannawat01/ai-fetch-healer

- Developed and published an open-source utility package on the npm registry for runtime healing.
- Handled functional debugging, safe JSON formatting, validation coverage testing, source control, and CI/CD workflows with GitHub Actions.

AWARDS & RECOGNITION

- National Software Contest national finalist - selected as the Northeast Thailand regional representative in the entertainment-software category for Silent Ember.
- Awarded development funding for Silent Ember through the National Software Contest.
- Pitched Silent Ember in the RMUTI CON startup track.

PROFESSIONAL STRENGTHS

Problem solving and debugging | Team collaboration | Self-learning and adaptability | Product-oriented development | Technical documentation

LANGUAGES

Thai - Native | English - Conversational
